

Assignment Spring Day-2

Q1. Create a spring project named calculator class with service layer and presentation layer. All the calculations are to be performed in the service class (i.e sum, multiplication, subtraction). And the presentation layer should only be responsible for returning the result to the main Runner class.

Q2. What are the steps involved in the bean life cycle? Also, show the examples for Initialization phase and destruction-phase using(`initMethod()` and user-defined `destroy()`, `close()` methods) i.e.by adding print statement saying “object with is initialised” or object is destroyed. For both singleton and prototype scope of beans.
